# INTRODUCTION

---

The tables contained in this book are designed especially for the use of Insurance Companies in calculating the items of Accrued Interest required by the Annual Statement to the Insurance Departments. \*For this purpose they will be found much more convenient than the tables in ordinary use. They are calculated on the basis of the exact time expired, and in their use it is unnecessary to calculate the time during which interest has accrued. All items for the calculation of one problem are found on one line of one page. The calculations are carried to the fourth decimal, giving results correct to the nearest cent for amounts of principal as large as \$100,000 and to the even dollar for amounts as large as \$10,000,000.

The method of using these tables will be readily understood by Accountants, but the following example may be of interest:

**EXAMPLE:**

Required to find the accrued interest on December 31st, of a mortgage in the amount of \$12,450.00. Mortgage is dated January 10th and bears interest at 6%. Interest payable annually.

Turning to the table for January at 6%, opposite the 10th, we find the interest as follows:

Accrued interest on \$10,000.00.....	\$583.56
Accrued interest on 2,000.00.....	116.71
Accrued interest on 400.00.....	23.34
Accrued interest on 50.00.....	2.92
<b>TOTAL .....</b>	<b>\$726.53</b>

If interest is payable semi-annually it has accrued from the last interest due date, and we would turn to July 10 and proceed as above.

While designed especially for use in compiling a statement as of December 31, the tables will be found equally well adapted for use in other interest calculation.

Example: To find the accrued interest on September 30 on a mortgage dated August 31 and bearing interest at 6%, we first find the time elapsed to be 30 days. Then in the 6% tables we run down the column of days on the right-hand side until we find 30, and proceed as above.

## JANUARY
